REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: This examiner is withdrawing the outstanding rejection of the claims over the teaching of Suzuri et al (USP 6,949,878). In particular, applicant urged in the arguments that cathode buffer layer 26 utilized as a blanket sheet is only used if its sheet conductivity is low enough so that the voltage of neighboring elongated members can be set independently. Applicant further pointed out that all the working examples utilized LiF, which is a dielectric. Applicant appears to be correct in their conclusions as evidenced by Wakimoto (USP 5,739,635). In particular, Suzuri stated that the cathode buffer layer utilized has been described in various Japanese patent publications. See col. 8, ll. 54-62. Wakimoto, which is the US equivalent of cited document JP 9-17574, explicitly states that the cathode buffer layer (termed an electron injection layer) is an insulator and is only capable of conducting current between the cathode and the organic EL element because it is 500 angstroms or less in thickness. See col. 2, l. 66 through col. 3, l. 15. Because the various cathodes 27 of Suzuri are separated by a pitch of 300 microns (col. 40, ll. 14-29), there would not be appreciable electrical interconnection between the cathodes 27 via the cathode buffer layer as suggested by the previous examiner and the claims are free of the teaching of Suzuri.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
